# Evaluation of Bug Sampling Methods on Blooming Cotton

# Bug Sampling Objectives

- Identify **efficient** and **accurate** TPB sampling methods in mid-season cotton
- Verify or adjust current TPB thresholds
- Standardize recommended scouting procedures and thresholds in the mid-south

# 2005 Sampling Methods

- 120 commercial fields in TN, MS, LA, AR
- 4 sites in each field
- 5 direct sampling methods (# bugs, time)
- 4 indirect sampling methods (damage, time)

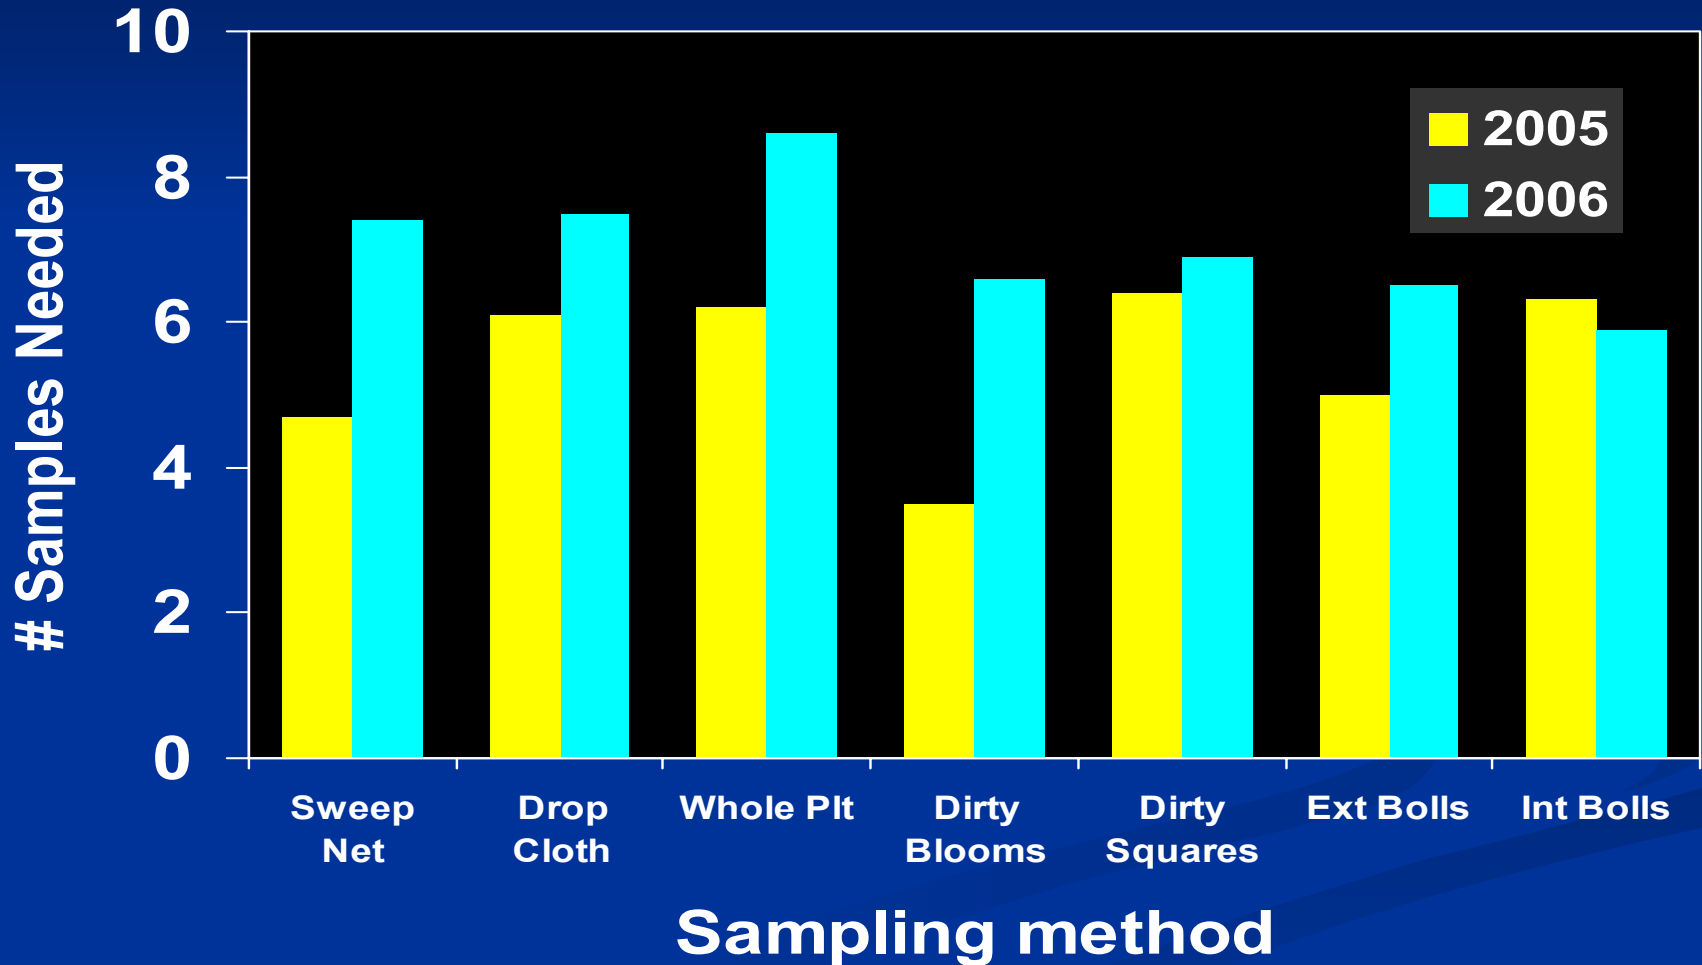

# 2006 Sampling Methods

- 60 commercial fields in TN, MS, LA, AR
- 4 sites in each field
- 3X per day (6-9 AM, 11 AM-2 PM, 4-7 PM)
- 3 direct sampling methods (# bugs, time)
- 4 indirect sampling methods (damage, time)

# Sampling Precision, 2006

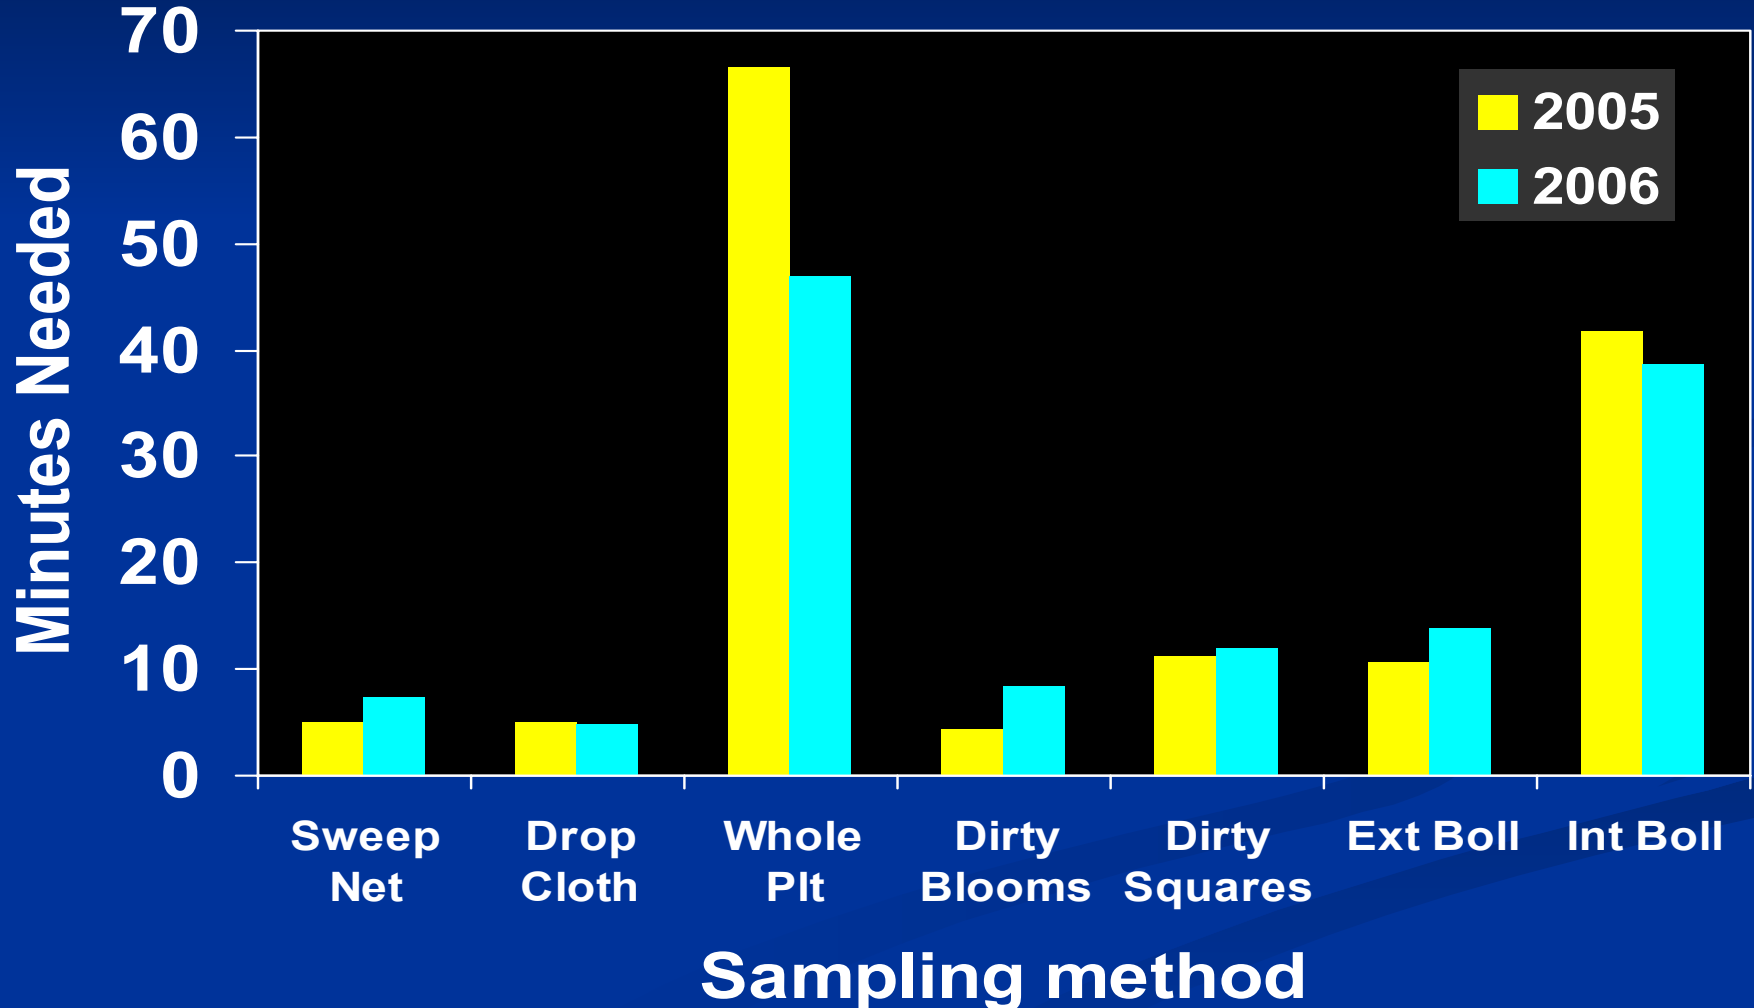

# samples needed to make a correct decision 80% of the time when the actual pest density is 20% > threshold

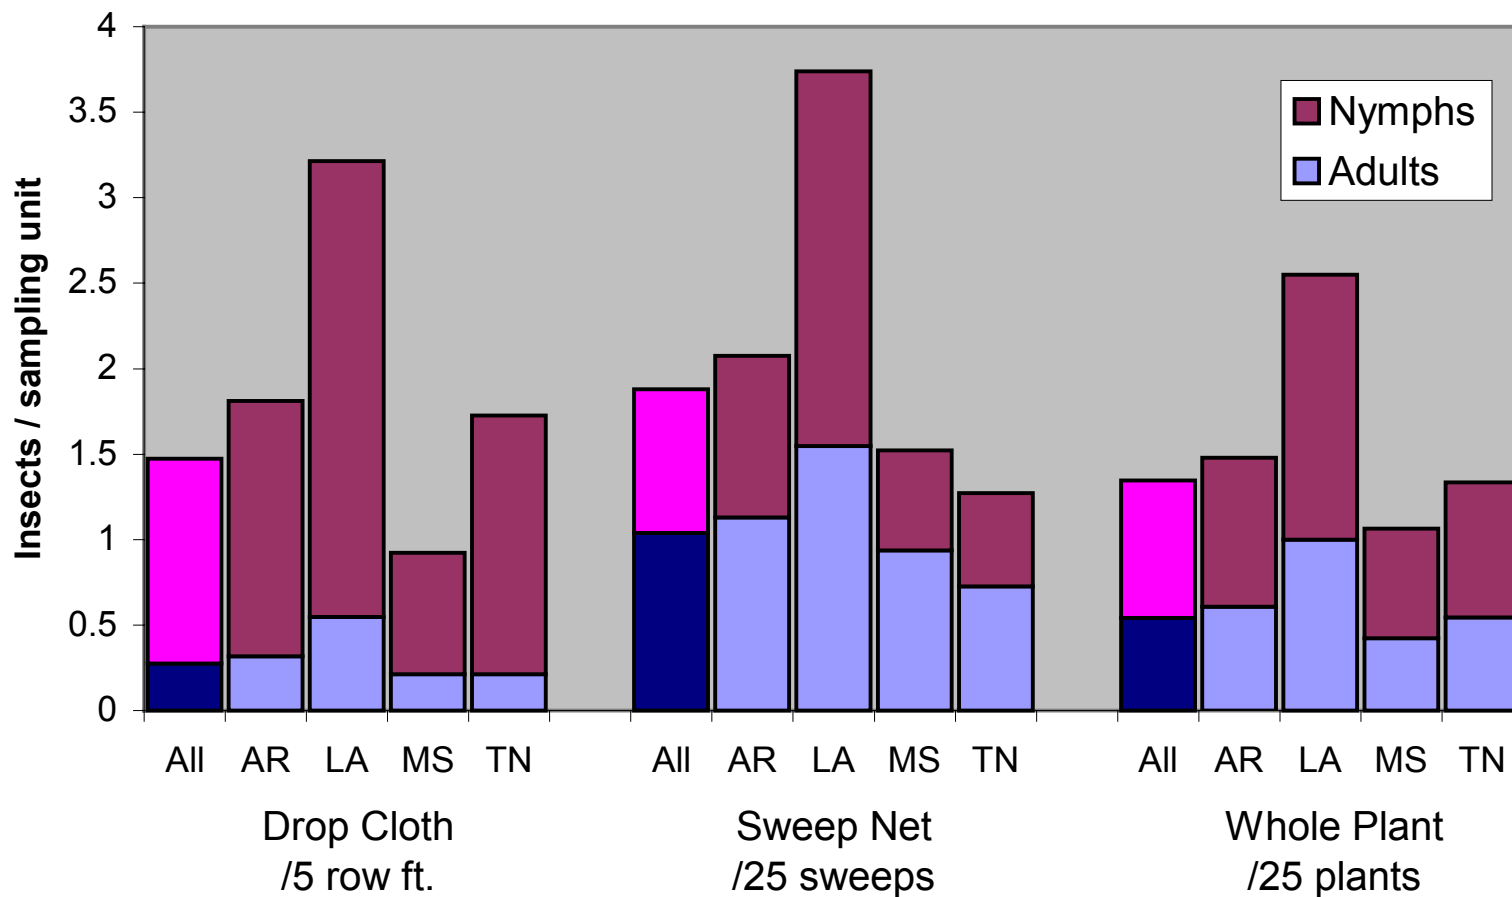

# Sampling Efficiency, 2006

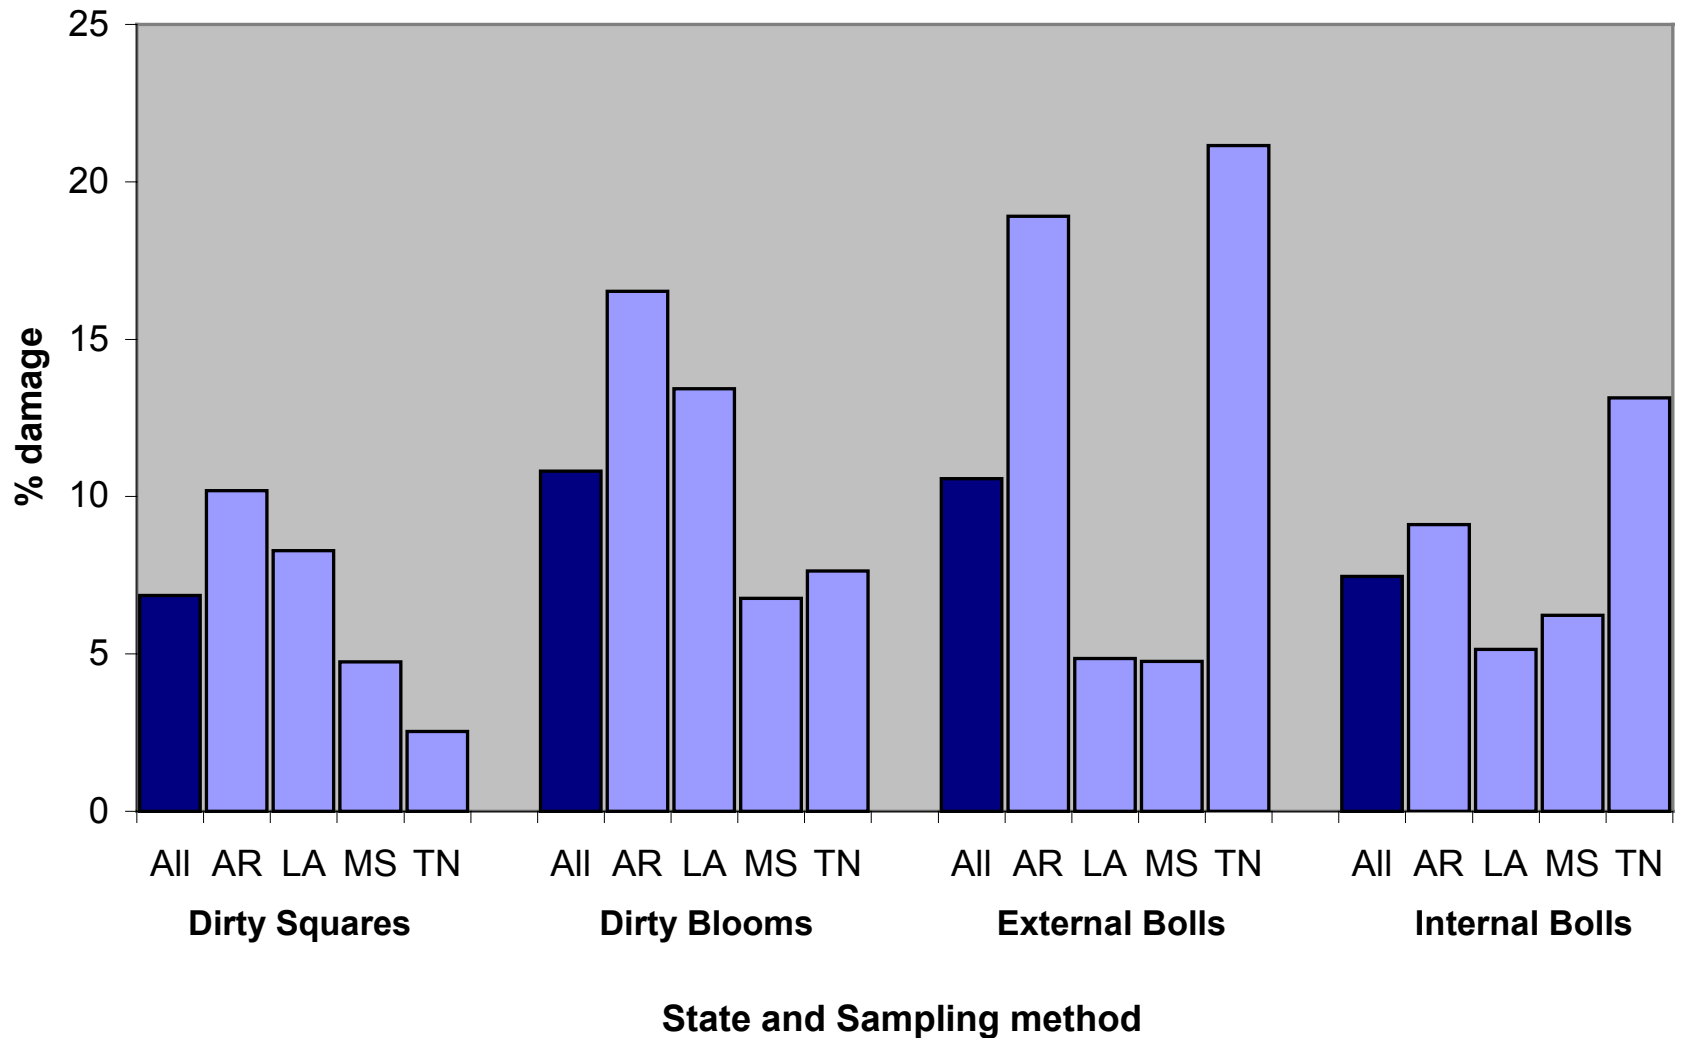

Minutes needed to make a correct decision 80% of the time when the actual pest density is 20% > threshold

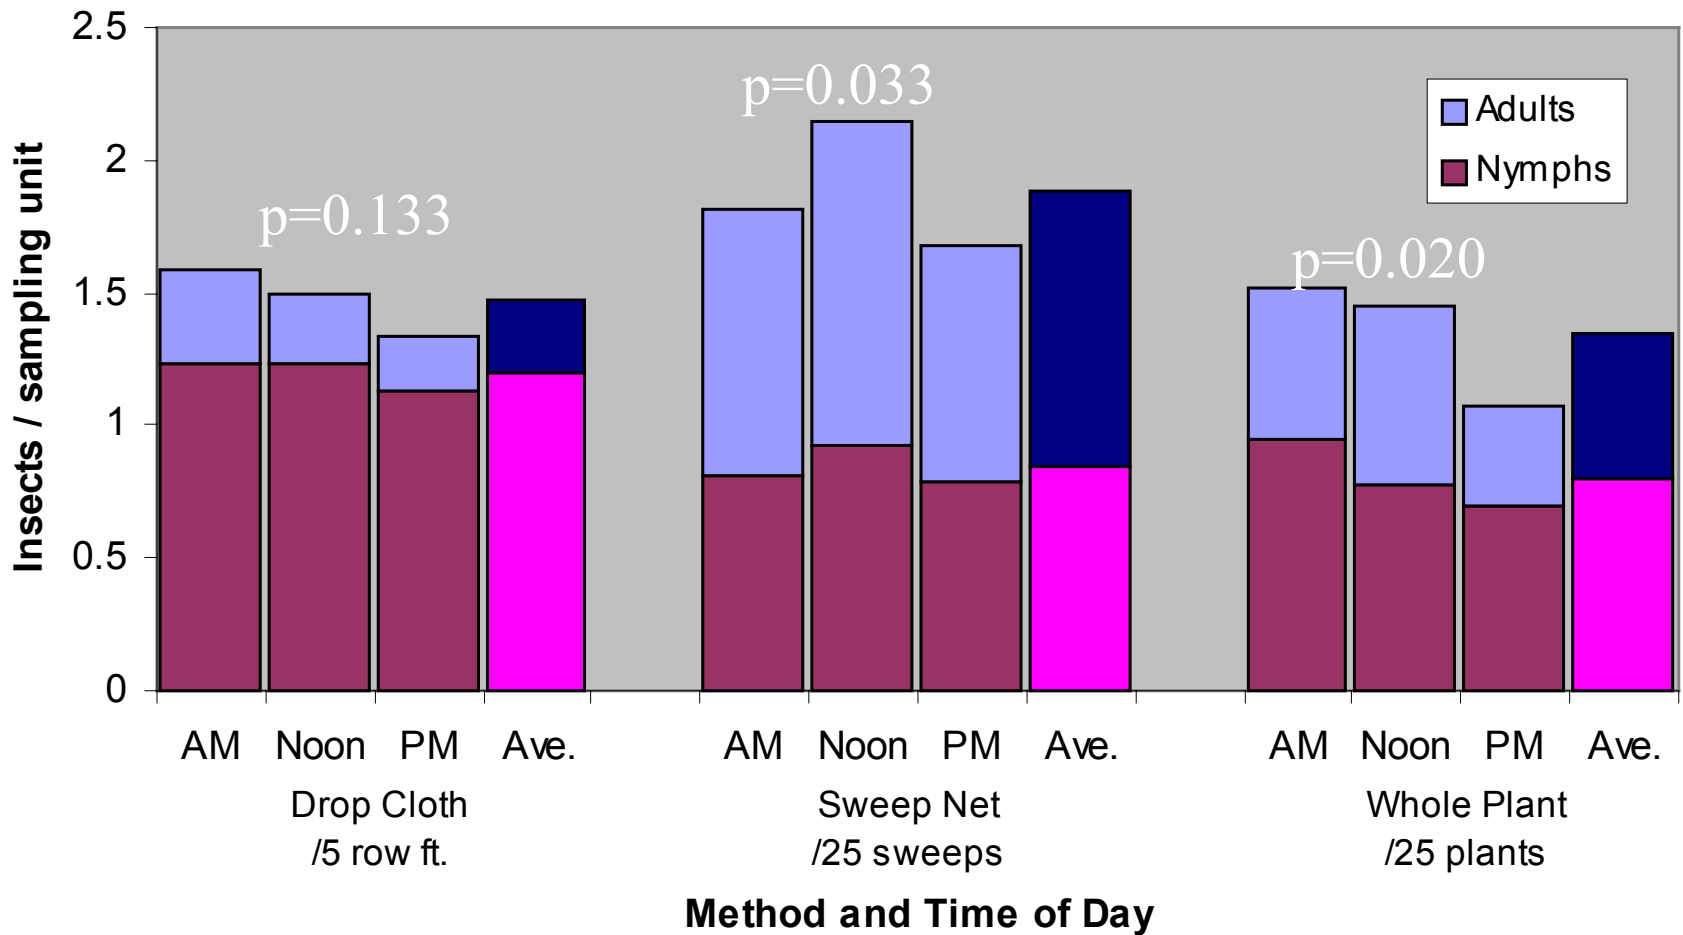

# Average Number of Plant Bugs per Sample by State, 2006

# Average % Damage by State, 2006

# Time of Day Variation

# Sampler Impact by Method

Method	F- value	P-value
Drop Cloth	3.08	<0.0001
Sweep Net	2.77	<0.0001
Whole Plant	3.51	<0.0001
Dirty Squares	1.69	0.0380
Dirty Blooms	2.26	0.0025
Ext. Bolls	5.63	<0.0001
Int. Bolls	3.34	<0.0001

# Other Factors Altering Bias Both Years

Factors monitored: temperature, wind speed, cloud cover, plant height, nodes, NAWF

Factor	Change
Wind	↓ PB with ↑ wind using whole plant sampling

# Sampling Methods Summary

## ■ Direct Sampling methods

- Sweep net is most efficient for adults
- Drop cloth most efficient for nymphs
- Sweep net and drop cloth similar for total bug efficiency
- Counts by all methods decrease during the hottest part of the day (3-6 PM), but drop cloth least affected
- Sweep nets catch fewer when foliage is wet

## ■ Indirect sampling methods

- Dirty blooms most efficient
- Dirty Squares least impacted by sampler

# Developing Bug Treatment Thresholds on Blooming Cotton

# TPB Thresholds- Mid Season

## Trial Treatments

- **Auto:** Insecticide application every 7 days from first bloom to cutout
- **Low:** Threshold of 1 PB / 5 row ft.
- **Med:** Threshold of 3 PB / 5 row ft.
- **High:** Threshold of 5 PB / 5 row ft.
- **VHigh:** Threshold of 10 PB / 5 row ft.

All applications made using acephate, Bidrin, or Vydate

# Mid-Season TPB Thresholds Catchot - MS, 2006

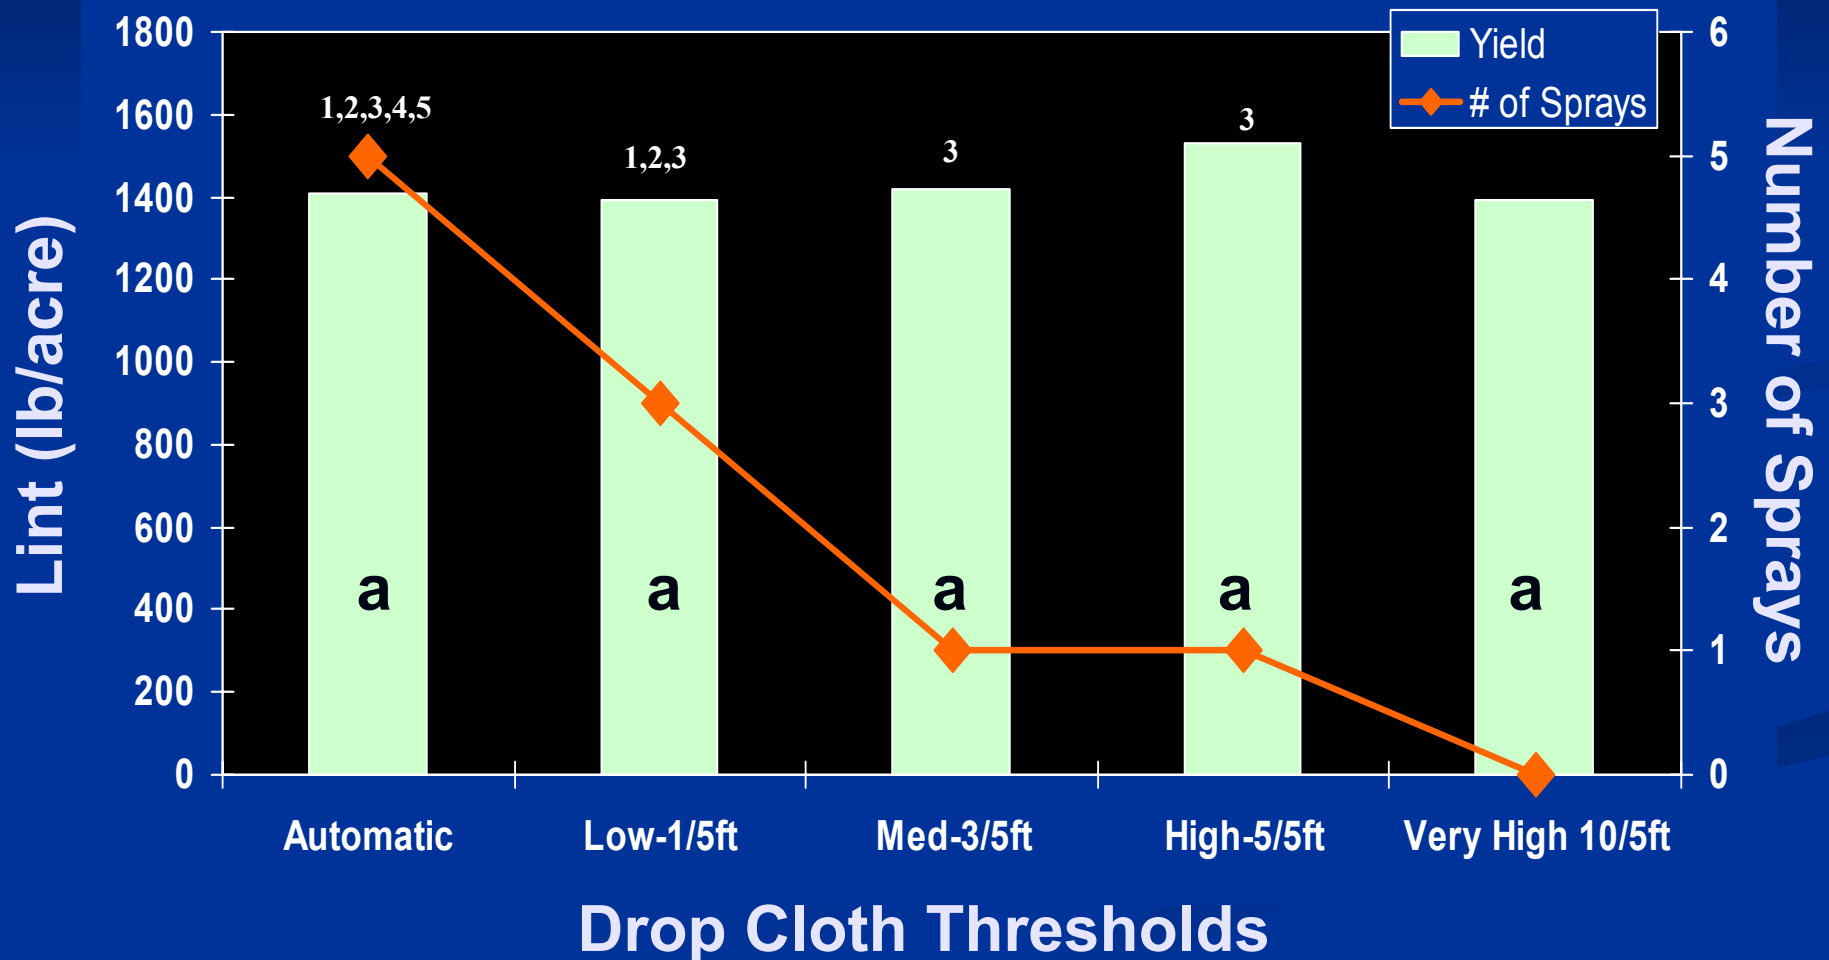

# Mid-Season TPB Thresholds Bagwell - LA, 2006

# Mid-Season TPB Thresholds

## Lorenz - Lee Co. AR, 2006

# Mid-Season TPB Thresholds Stewart - Lauderdale, TN, 2006

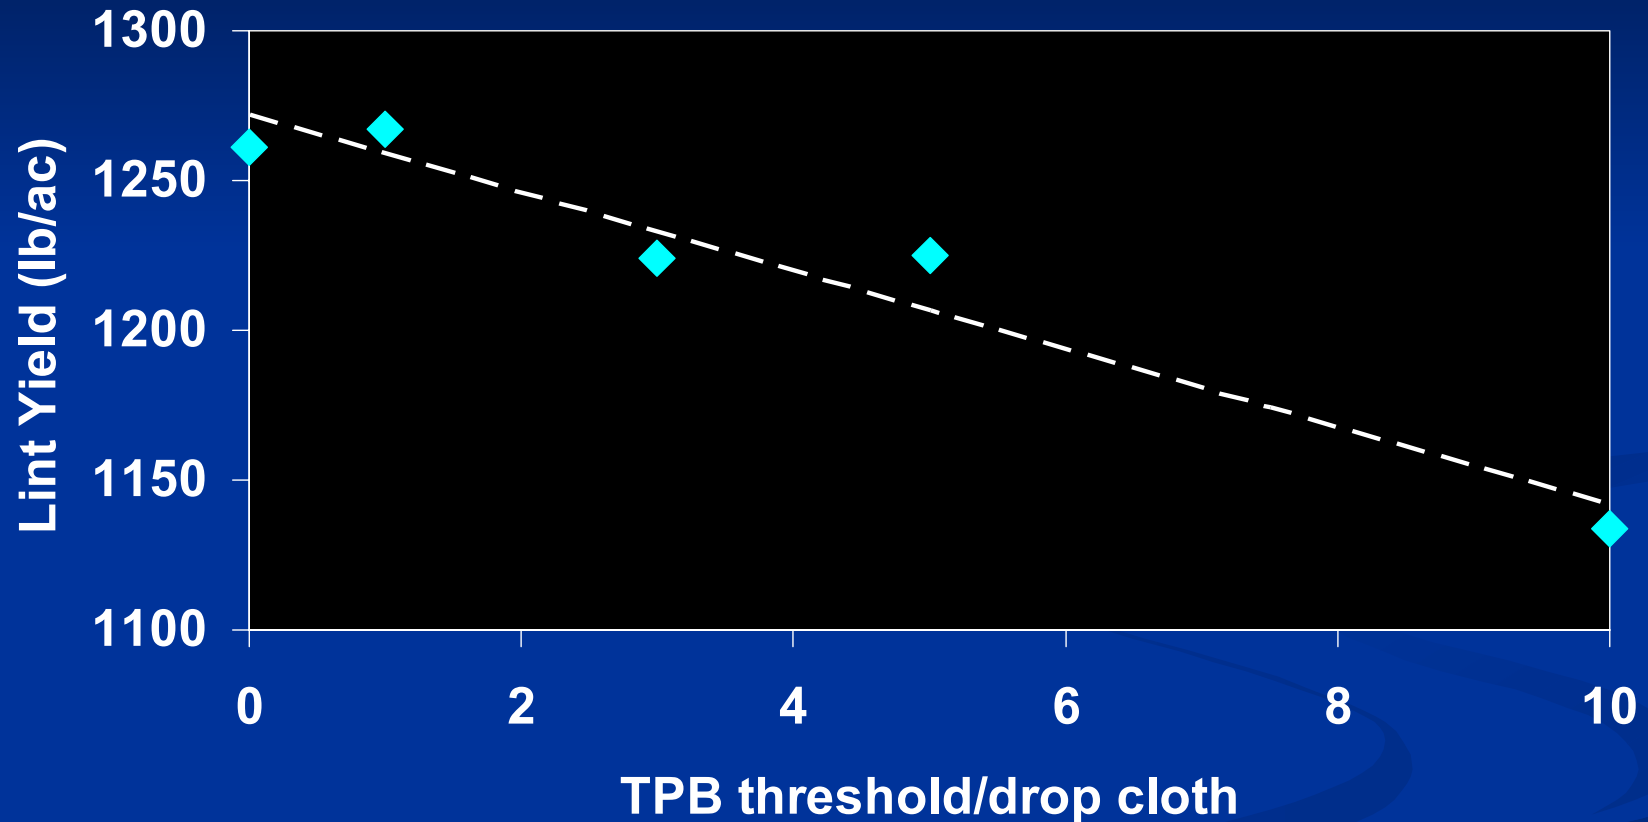

# Mid-Season TPB Thresholds

## Mid-South (4 locations), 2006 where high threshold reached

# Mid-Season TPB Threshold Summary

**Lost 13 lb lint per acre for each 1 TPB /5 row ft. increase in threshold**

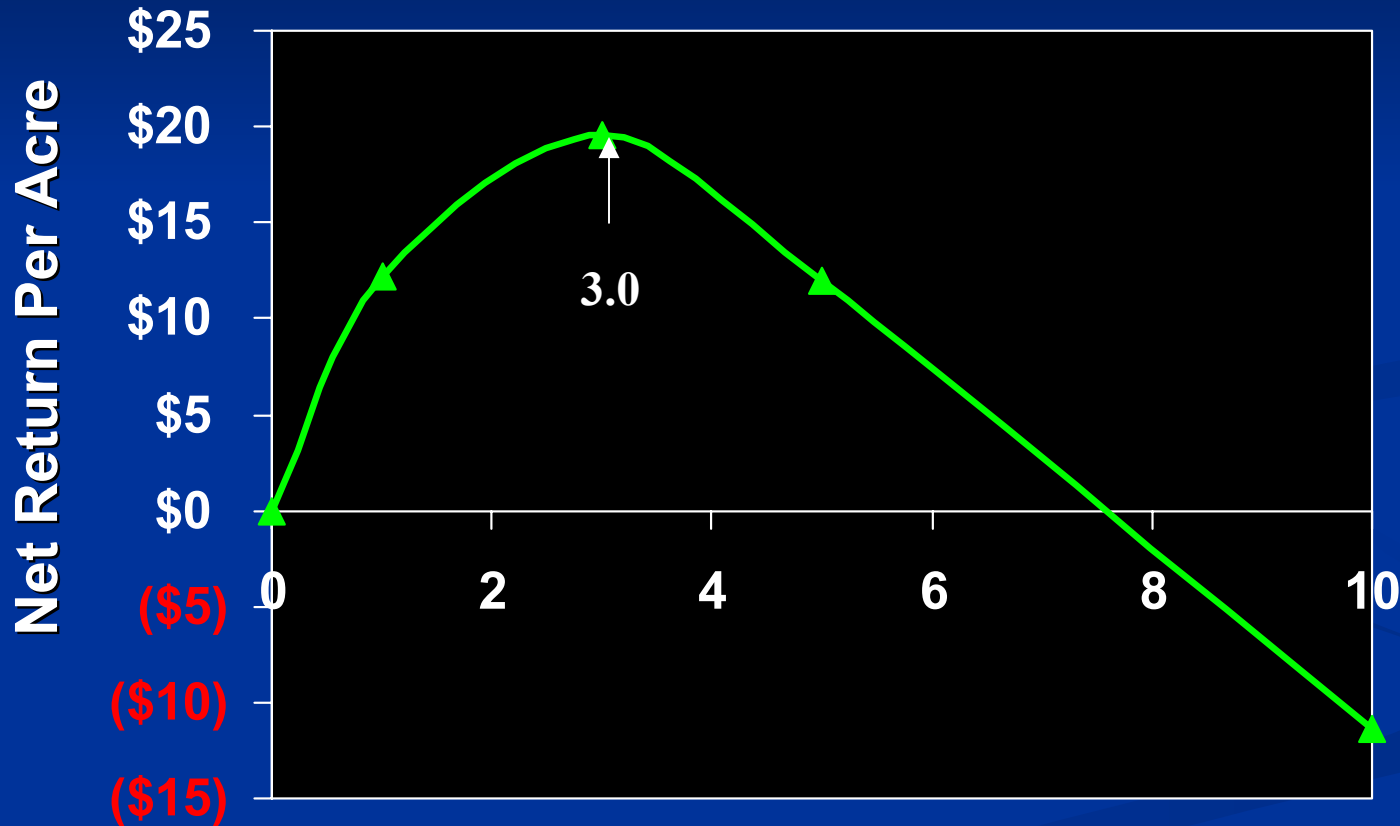

# Mid-Season TPB Threshold Current Economics

insecticide =  
\$10/application  
cotton value =  
\$0.50/lb

# Mid-Season TPB Threshold Current Economics

insecticide =  
\$10/application

cotton value =  
\$0.50/lb

TPB per drop cloth (5 row ft.)

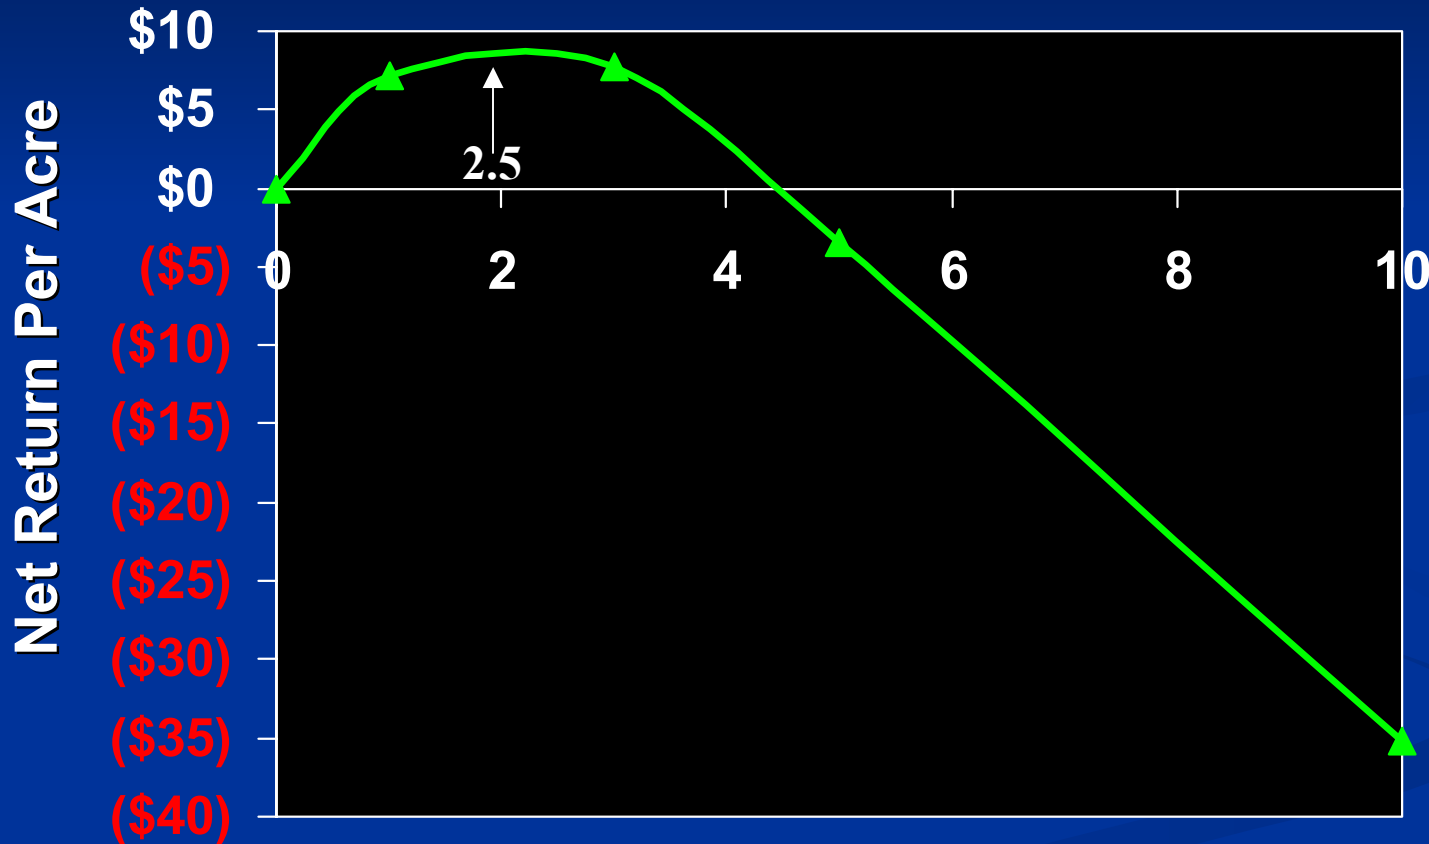

# Mid-Season TPB Threshold

## Low Cost, High Value Economics

# Mid-Season TPB Threshold

## Low Cost, High Value Economics

insecticide =  
\$8/application

cotton value =  
\$0.60/lb

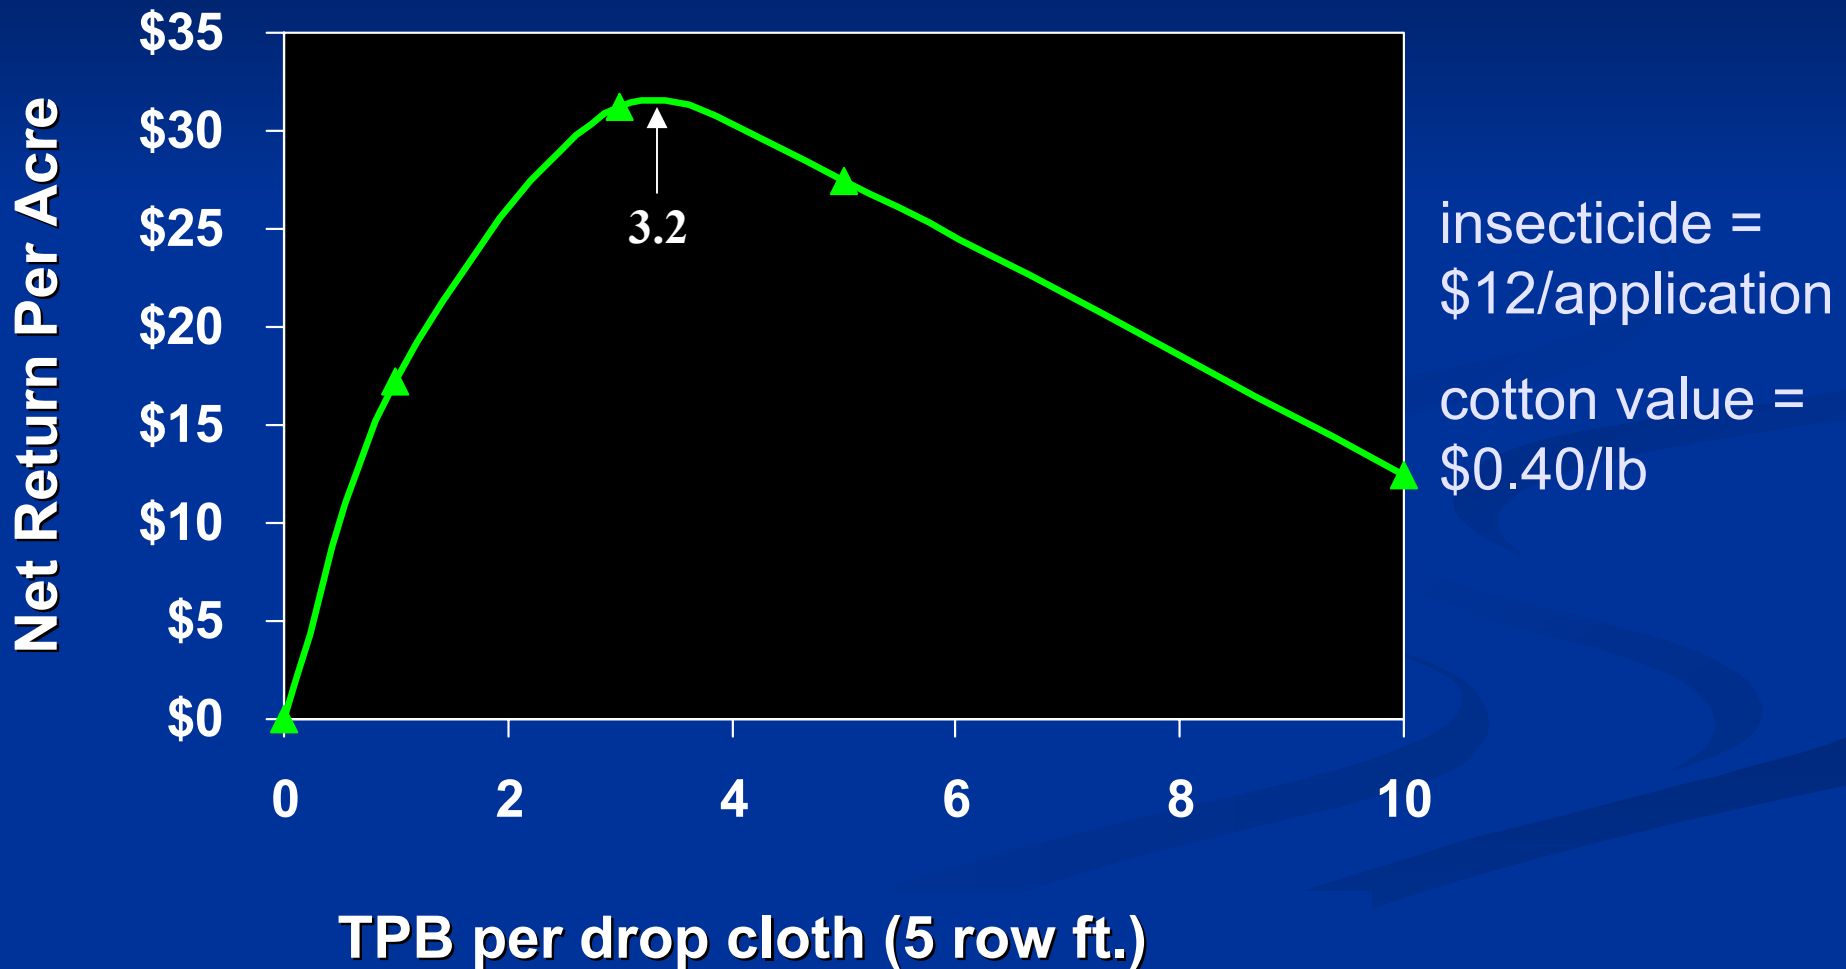

TPB per drop cloth (5 row ft.)

# Mid-Season TPB Threshold High Cost, Low Value Economics

insecticide =  
\$12/application  
  
cotton value =  
\$0.40/lb

# Mid-Season TPB Threshold High Cost, Low Value Economics

# Conclusions

- **Threshold recommendations are now based on 3 bugs/5 ft.**
- **Threshold of 10-15% dirty squares, 2.5-3 TPB/5 row ft on a drop cloth or 10-15 TPB/100 sweeps looks to be optimal**

# Thank You
