# Perception of Soybean Fertilization

**Past**: “*from the standpoint of removal ... soybeans are ‘hard on the land’ ... and would be classed as a crop that rapidly depletes soil bases*” including K, Ca, and Mg

*Hammond et al., 1951*

**Current**: Often grown in rotation with corn; scavenge residual fertilizer or mine existing soil reserves

# Nutrient Uptake & Removal: 60 Bushel Soybean

Nutrient	Required	Removed	Harvest
	to Produce	with Grain	Index
	lb acre <sup>-1</sup>		%
N	245	179	73
P <sub>2</sub> O <sub>5</sub>	43	35	81
K <sub>2</sub> O	170	70	46
S	17	10	61
Zn (oz)	4.8	2.0	44
B (oz)	4.6	1.6	34

Bender et al., 2015. Agronomy Journal (107:563-573)

# P and K Uptake & Removal: Soybean vs Corn

Nutrient	Required to Produce		Removed with Grain		Remain in Stover	
	Corn	Soy	Corn	Soy	Corn	Soy
	lb acre <sup>-1</sup>					
<b>P<sub>2</sub>O<sub>5</sub></b>	<b>101</b>	<b>43</b>	<b>80</b>	<b>35</b>	<b>21</b>	<b>8</b>
<b>K<sub>2</sub>O</b>	<b>180</b>	<b>170</b>	<b>56</b>	<b>70</b>	<b>124</b>	<b>100</b>

# Potassium Uptake in Soybean: 60 Bu/Ac

## Key Points:

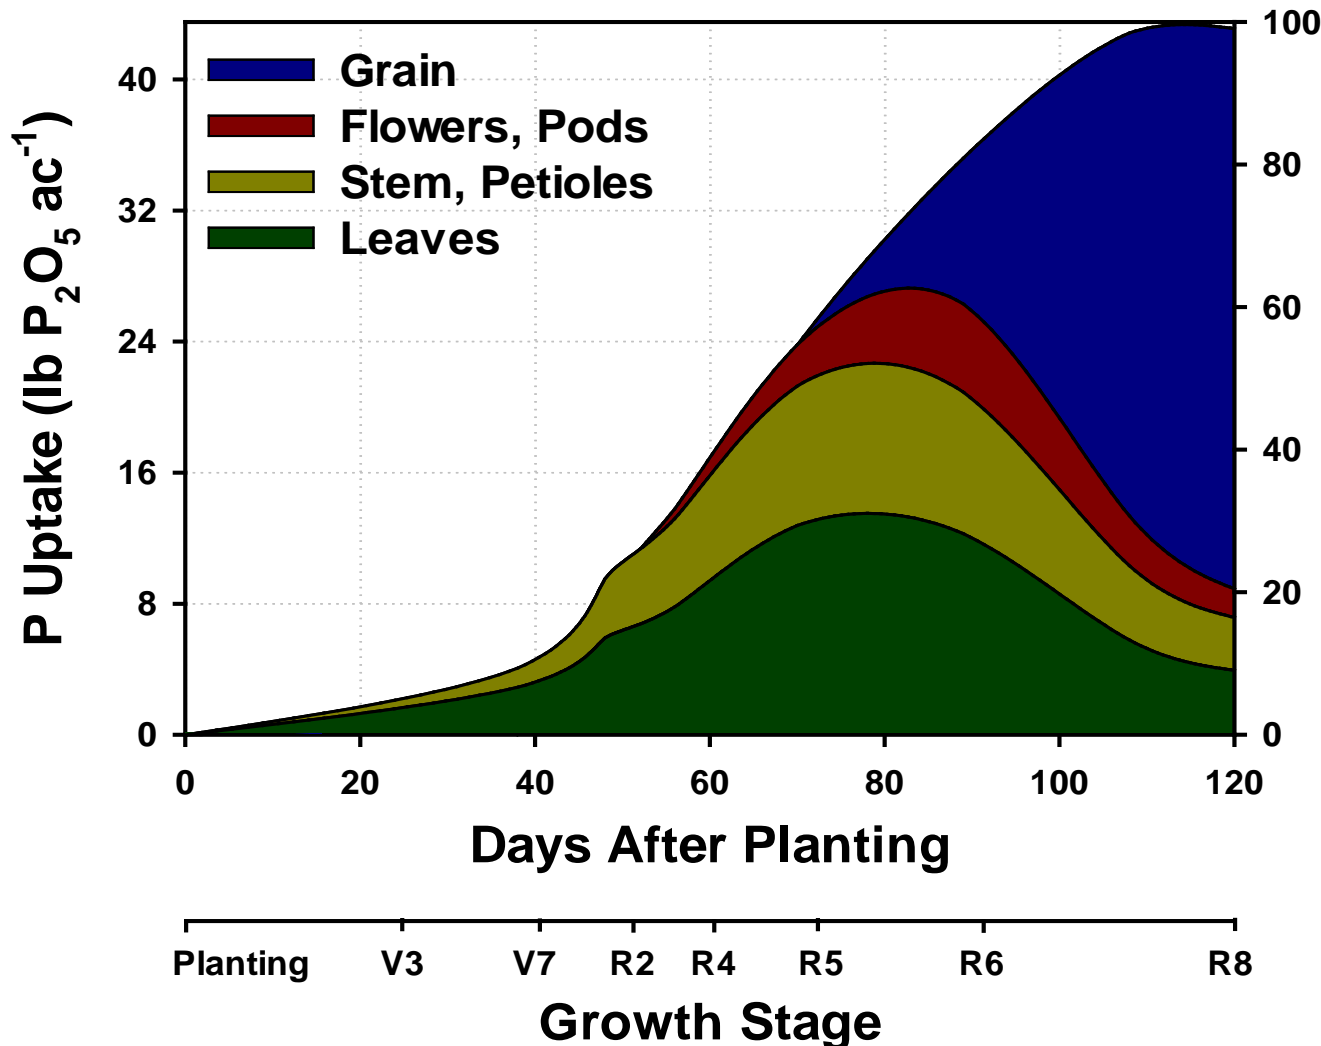

- K is critical for enzymes, water relations, etc.
- Max uptake rate of 3.5 lbs K<sub>2</sub>O/Ac/Day (50 days)
- Stems serve as important reservoirs for extra K
- Non-grain K returned to soil

# P and K Uptake & Removal: Soybean vs Corn

Nutrient	Required to Produce		Removed with Grain		Remain in Stover	
	Corn	Soy	Corn	Soy	Corn	Soy
	lb acre <sup>-1</sup>					
<b>P<sub>2</sub>O<sub>5</sub></b>	<b>101</b>	<b>43</b>	<b>80</b>	<b>35</b>	<b>21</b>	<b>8</b>
<b>K<sub>2</sub>O</b>	<b>180</b>	<b>170</b>	<b>56</b>	<b>70</b>	<b>124</b>	<b>100</b>

# Phosphorus Uptake in Soybean: 60 Bu/Ac

## Key Points:

- 45% of P uptake during seed-fill
- Rapid uptake for 70 days straight
- 80% partitioned to grain, removed
- Large demand for P during seed-fill means soybean needs P each year, not biennially

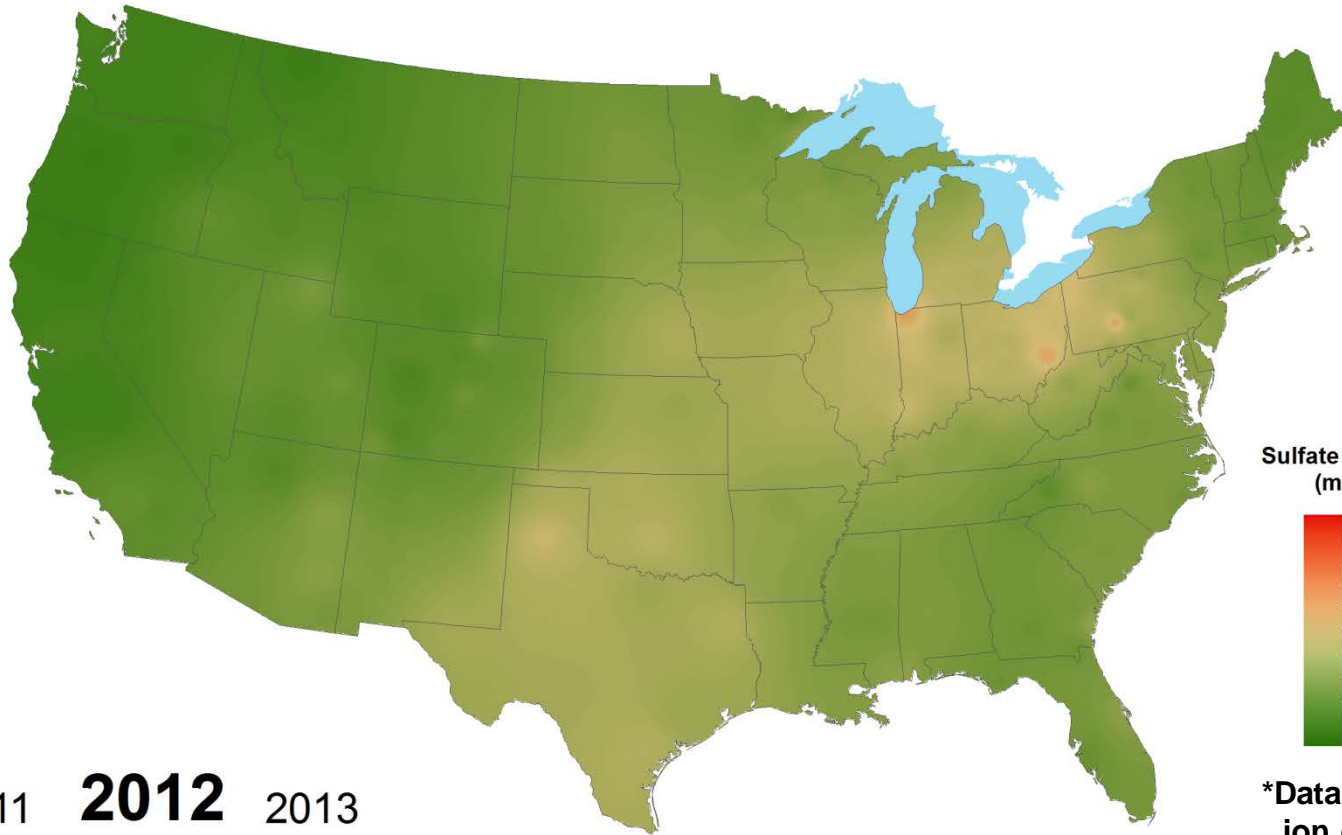

# Nutrient Uptake & Removal: 60 Bushel Soybean

Nutrient	Required to Produce	Removed with Grain	Harvest Index
	lb acre <sup>-1</sup>		%
N	245	179	73
P <sub>2</sub> O <sub>5</sub>	43	35	81
K <sub>2</sub> O	170	70	46
<b>S</b>	<b>17</b>	<b>10</b>	<b>61</b>

B (oz)	4.6	1.6	34

Bender et al., 2015. Agronomy Journal (107:563-573)

# Reduced Atmospheric Deposition of S

Sulfate as  $\text{SO}_4^{2-}$   
(mg/L)

\*Data represents sulfur ion concentration of precipitation.

Data courtesy of National Atmospheric Deposition Program/National Trends Network (<http://nadp.isws.illinois.edu>)

# Sulfur Uptake in Soybean: 60 Bu/Ac

## Key Points:

- Season-long uptake of S
- Sulfate S: early season needs; Elemental S: late season needs
- Needed in the grain for amino acid development

# Soybean Management Trials

## 2015 Research Trials:

- 6-7 plots at 3 locations
  - Reference: (Marksville, LA: 31°N)
- Banded phosphate (Mosaic's MicroEssentials SZ) or broadcast potassium (Mosaic's Aspire), or both
- Different company seed (Monsanto, Syngenta, Winfield) and foliar protection products (BASF or Syngenta)
  - Normal and full maturity variety
- All in 30 inch vs 20 inch rows, at a seeding rate of 160,000 plants/acre

## Narrow Row Spacing Increases Yield

<b>Location</b>	<b>30"</b>	<b>20"</b>	<b>Δ</b>
	————— bu Ac <sup>-1</sup> —————		
<b>DeKalb</b>	<b>61.7</b>	<b>69.6</b>	<b>+7.9*</b>
<b>Champaign</b>	<b>84.7</b>	<b>93.2</b>	<b>+8.5*</b>
<b>Harrisburg</b>	<b>77.5</b>	<b>80.0</b>	<b>+2.5</b>
<b>Average</b>	<b>74.6</b>	<b>80.9</b>	<b>+6.3*</b>

\* Significantly different at  $P \leq 0.01$ . Average of 7 Trials at 3 locations during 2015.

# Standard vs High Tech System - 2015

## Phosphorus

**P applied year before to corn**

75 lbs  $P_2O_5$  as MESZ (N, P, S, & Zn)  
Banded 4-6" under row at planting

## Potassium

**K applied year before to corn**

75 lbs  $K_2O$  as Aspire (K & B)  
Broadcast and incorporated at planting

## P and K

**P & K applied year before to corn**

MESZ and Aspire applied as above

## Foliar Protection

**No foliar protection**

Fungicide and Insecticide at R3

## Seed Treatment

**Untreated or Fungicide only**

Fungicide, Insecticide, Nematicide

## Row Arrangement

**30 inch row spacing**

20 inch row spacing

# Narrow Rows Magnify Value of Management

Row Space	Standard	High Tech	Increase from Management
inches	————— bu Ac <sup>-1</sup> —————		
30	70.7	77.8	+7.1*
20	74.3	85.4	+11.1*
Increase from 20 inch rows	+3.6*	+7.6*	

\* Significantly different at  $P \leq 0.01$ . Average of 7 Trials at 3 locations during 2015.

# Standard vs High Tech System - 2015

-Foliar	73.8	+3.1*	82.9	-2.5
-Seed Trt	72.3	+1.6	82.6	-2.8*

\* Significantly different at  $P \leq 0.01$ . Average of 7 Trials at 3 locations during 2015.

## **Agronomic Management of Soybean - Conclusions**

- **For maximum soybean yield, a system's approach is needed which combines genetic, agronomic, and plant nutrition factors with known impacts on soybean productivity.**
- **Nutrients with high requirements for production, high harvest index values, or unique uptake patterns such as N, P, K, S, Zn, and B are critical for high yields.**
- **Not all nutrients are accumulated at the same time or used in the same way.**

## **Agronomic Management of Soybean - Conclusions**

- **Agronomic management interacts with row spacing, with a greater response to crop nutrition in narrow row environments.**
- **Large opportunities exist to increase soybean productivity and require a high yielding variety, positioned for maximum light interception, protected from stress, and fed with the right balance of crop nutrients.**
