

Enhanced Rice Production through Biostimulants

FERTIACTYL®

- 
- Minerals and Trace elements
 - Bioactive Humic Acids
 - Auxins-Rich Plant Extract
 - Zeatin-Rich Seaweed extract
 - Glycine Betaïne
 - Salicylic Acid

FERTILEADER®

- 
- Mineral and Trace elements
 - IPA / Seactiv
 - Glycine Betaïne

1 Plant Nutrient Complex

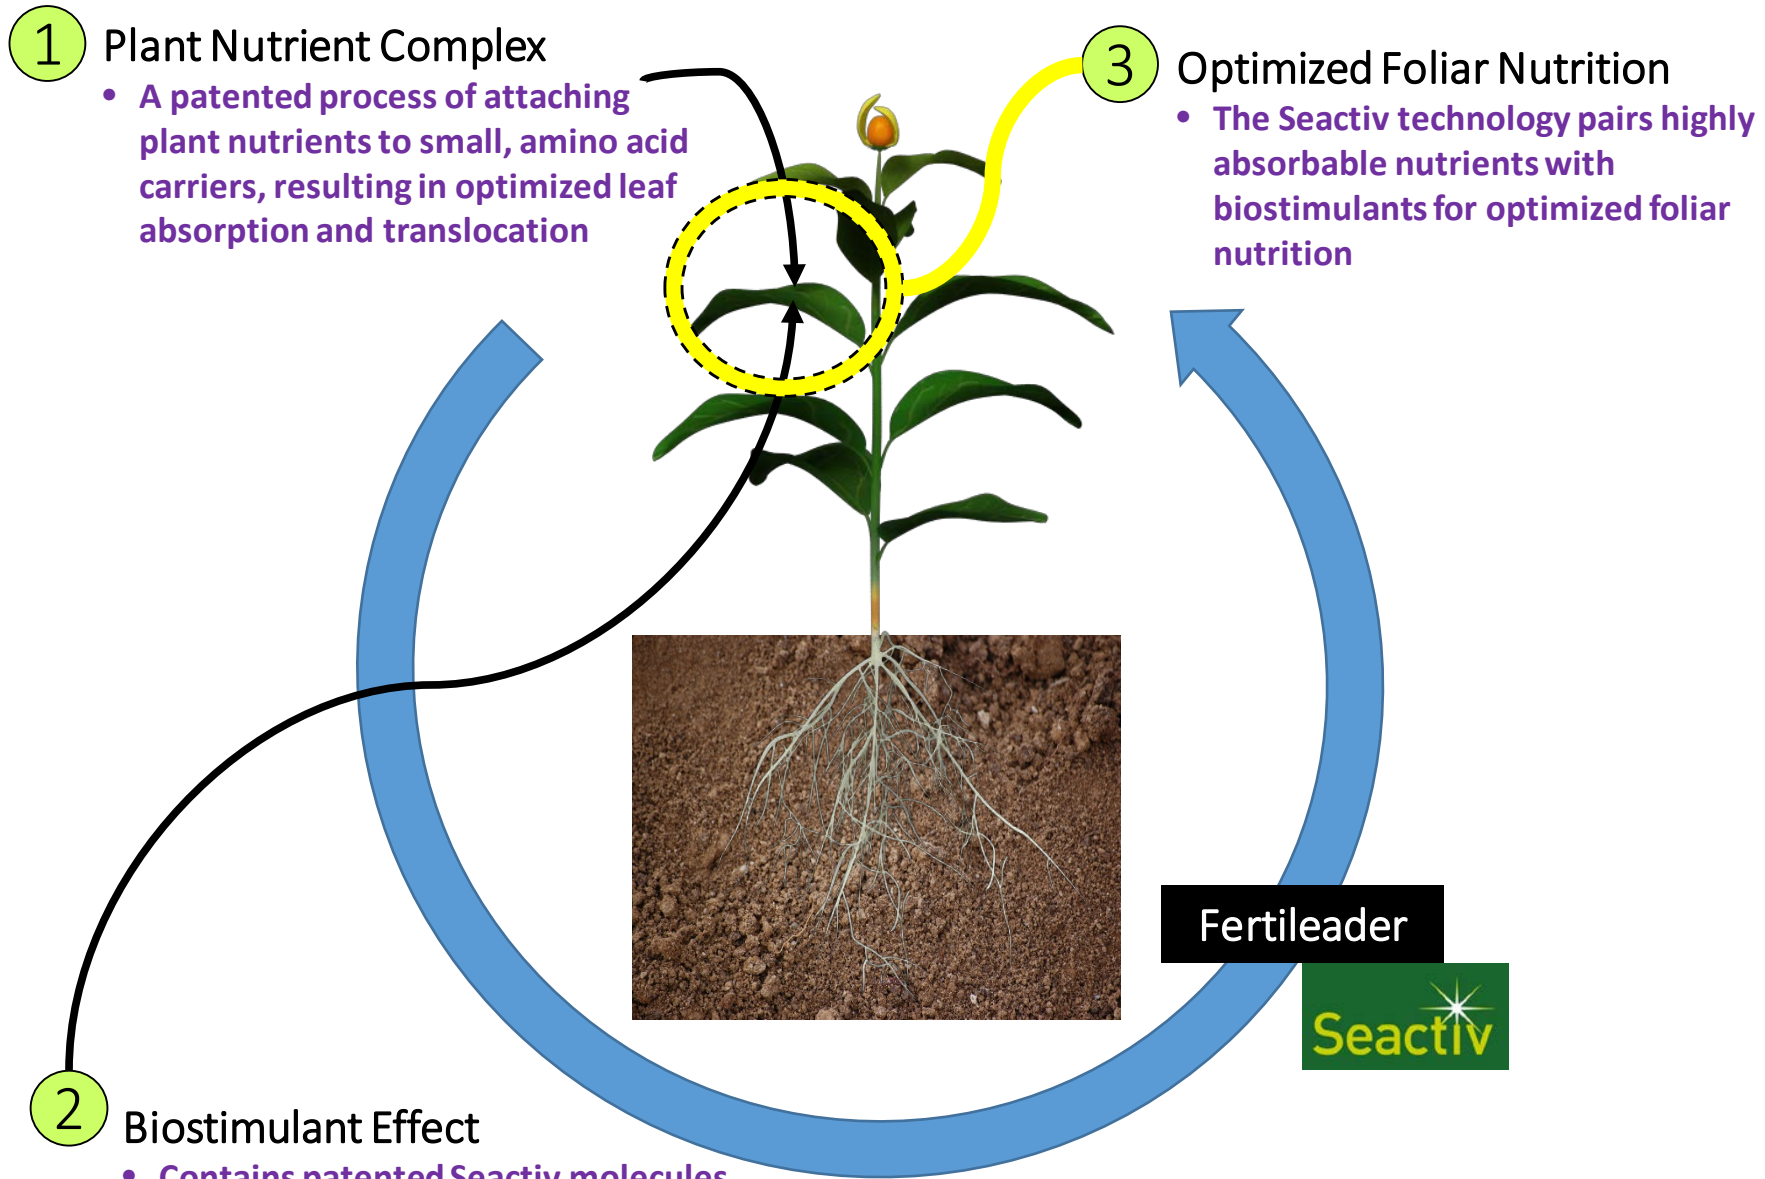

- A patented process of attaching plant nutrients to small, amino acid carriers, resulting in optimized leaf absorption and translocation

3 Optimized Foliar Nutrition

- The Seactiv technology pairs highly absorbable nutrients with biostimulants for optimized foliar nutrition

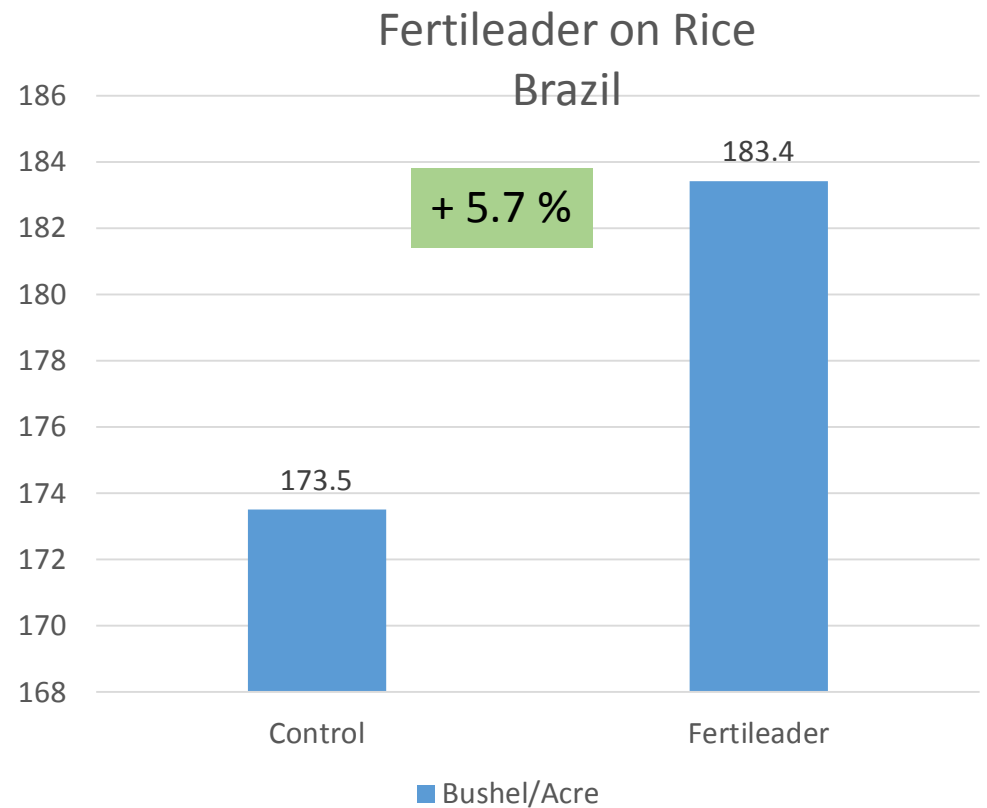

2 Biostimulant Effect

- Contains patented Seactiv molecules that are known to stimulate physiological processes related to metabolism and growth

**Fertileader Fix, Rice produce
Timac Agro, Rodrigo Silva Leites, Brazil, 2012-2013**

Treatment:
Fertileader: 1 pint per acre
Before flowering

Benefits of Fertileader Products

- Seactiv - increases photosynthesis which increases chlorophyll levels, resulting in increased plant energy.
- Seactiv - aids in nutrient uptake
- In house studies have shown an increase in milling quality in hybrid rice
- Application Timing - Panicle Initiation (PI) to early heading (10%)
- Application Rate – 1-2 pints/acre
