

PROTIVATE™

PROTIVATE™ Nutritional Seed Enhancer

Strategize with the 4R Framework

Right Time: All three formulations ensure your plant receives essential early season nutrition during a difficult, yet critical, time of year.

Right Place: Application directly on the seed and near the root zone ensures crop nutrition is in the right place.

Right Source: The balanced nutritional package of each formulation helps ensure young crops get the correct source of nutrition.

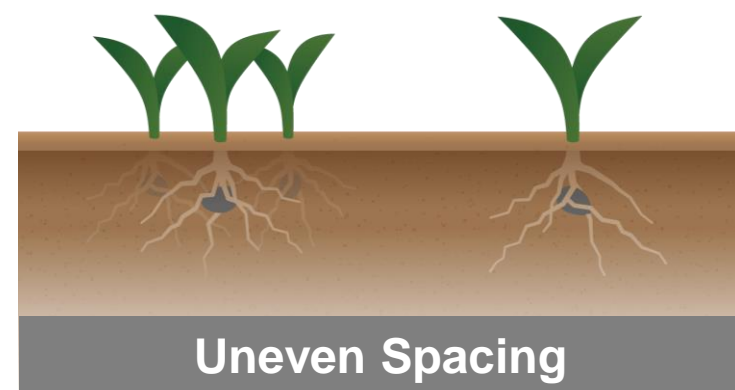

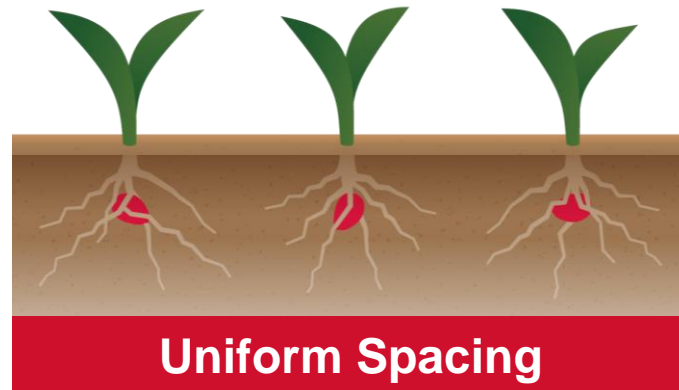

Right Rate: PROTIVATE™ application rates deliver the exact amount of nutrients the seed needs at planting to effectively combat early season stressors.

A Dual-Purpose Solution

PROTIVATE™ not only provides nutrition needed for early season growth, but also eliminates the need for talc. As a talc replacement, PROTIVATE:

- Offers flowability properties to help combat bridging and clumping.
- Encourages better seed singulation, helping to avoid costly skips and doubles during planting.

PROTIVATE™ Application Methods

Three formulations offer growers and retailers more flexibility with opportunity to treat either directly in the planter or downstream at the retailer in bulk treatment.
