- Sec. 3 & Supplemental label - soon

- Applications are limited to Oct. 1st to May 31
- Use rate is 0.7 -2.1 qts/A
- Can make 2 apps/year at a max of 4.2 qts/A
- Recommend an adjuvant like Dyne-Amic[®] or Agri-Dex[®]
- No aerial applications, ground rigs only
- Recommended spray volume - 15 gpa
- Target Divine Nightshade at 4 – 24 inches tall

- **Applications can be made year round**
- Use rate is 0.7 -2.1 qts/A
- Can make 2 apps/year at a max of 4.2 qts/A
- Recommend an adjuvant like Dyne-Amic[®] or Agri-Dex[®]
- **Approved for aerial applications where permitted**
- Recommended spray volume - 15 gpa
- Target weeds: Divine Nightshade at 4 – 24 inches tall and many other problematic weeds

- The day the Section 3 label is approved the existing Section 18 label is cancelled
- EPA suggested that we submit a Supplemental label so that there are no gaps in an approved label for use
- Proposed Supplemental Label has been submitted and should be approved at the same time as the Section 3 label
- LDAF will approve supplemental as they receive EPA approval

- Current Sec. 18 label allows for use through May 31, 2024
- Trycera has controlled Divine Nightshade in sugarcane in 16 parishes
- The average use rate has been 1.4 qts/A
- IR-4 residue trial was completed & final report submitted with a petition to establish a residue tolerance to EPA in Nov., 2022
- PRIA Date – February 25, 2024
- Supplemental Label submitted and should be approved
- **Trycera is the only triclopyr label for use in sugarcane**
