

A tiger with orange and black stripes is walking across the rotor of a combine harvester. The harvester is processing a field of grain, with the rotor blades visible. The tiger is positioned in the center of the frame, walking from left to right. The harvester's metal components and the grain are visible in the background.

Role of Sulphur in Row Crops

Proteins and Chlorophyll

- Works with N, improving NUE.
- Legumes, improves biological nitrogen fixation.

Left, farmer's UTC, bottom of field.

Right, Tiger 90, cold water levee.

NPKS - Limiting

3 Days After Defoliation

Plant Uptake vs. Crop Removal

How much S do the plants need?

S Recommendations

You'll Want A Picture of this Slide...

- If soil test S levels are below 15 ppm / 30 lbs. A⁻¹, use crop S uptake recommendations.
 - 0.55 lbs./ton Cane
 - 15 lbs./bale Cotton
 - 0.11 lb./bu. Rice
 - 0.36 lb./bu. Soybean
 - 0.18 lb./bu. Corn
- If over 15 ppm / 30 lbs. A⁻¹, visit with your consultant/retail agronomist.

X Expected Yield/A

Product packaging is for illustrative purposes and may differ slightly from the actual package.

4-Rs

- **Advantage**

- Sulfate is water soluble.
- Immediately available to the plant.

- **Disadvantage**

- Sulfate is water soluble.
- Subject to leaching.

Sulphur Bentonite

4-Rs

- **Advantage**

- Elemental sulfur is not immediately water soluble.
- Not subject to leaching until converted to sulfate.

- **Disadvantage**

- Elemental sulfur is not water soluble.
- Not immediately available to the plant.
